

Sigma Board SB45-00

IMPACT SIGMA Board is a versatile patient positioning solution designed to support treatments from head to foot, covering all sites—from head & neck to pelvic regions. Made from high-strength, radiolucent carbon fibre, it ensures compatibility with simulation and treatment machines for seamless setup transfer. Its fully indexable design supports a wide range of accessories, enabling site-specific protocols on a single platform. This eliminates the need for multiple boards, delivering consistent and reliable immobilization across diverse clinical needs. The complete setup includes headrests, arm and wrist handles, kneefix and feetfix cushions and a tilting breast board. Each accessory can be slotted in or removed depending on treatment site requirements, offering maximum flexibility.

Salient features:

- ✓ Fully indexed modular design for quick and easy integration of positioning accessories
- ✓ Supports adult and paediatric use through interchangeable accessory slots
- ✓ Faster setup minimizes patient movement and enhances workflow efficiency
